I am reviewing Justin Fairbourn's Homework 6 Dictionary assignment. I will be using the code inspection method.

Summary of findings:

- In Dictionary.h use new lines for readability(might just be how git uploaded it).
- In Dictionary.h getByKey and RemoveByKey no need to pass to another method. Keeps things more localized.
- Not sure why most of the code in the main.cpp is commented out.
- For the Dictionary.add method should make it so it can take a key and a value as was in the description.

Overall a job well done on this assignment.
